

Ahmed Hatem Fawzi Elghamry

Full-Stack Developer

ahmedhatems568@gmail.com | +20 109 139 1754 | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Summary

Full-stack developer working across Next.js, TypeScript, Django REST, Node.js, Laravel and ASP.NET Core (C#), with five products live and in real use: an AI marketing platform for Egyptian SMBs that I built and run alone (Paymob payments, real-time AI chat, Azure CI/CD), an offline exam platform used by 1,225 students in a single day at Culture and Science City, a bilingual smart-home store, the backend and admin dashboard of a health app on the App Store and Google Play, and a POS running in 5 retail stores. Comfortable from PostgreSQL, SQL Server and Supabase to AWS, Azure and GitHub Actions, and experienced with AI-assisted development.

Experience

Nutrisha Backend & Dashboard Developer | Jun 2026 to Present

Backend and dashboard developer for an AI nutrition & subscription app on the App Store and Google Play, focused on API hardening, cloud infrastructure and the internal admin dashboard.

- Built REST API with ASP.NET Core, C#, and SQL Server (layered BL/DL architecture)
- Migrated media storage to AWS S3 with server-side validation to block stored-XSS uploads
- Hardened auth with JWT, OTP, and per-IP rate limiting against brute-force attacks
- Reduced attack surface: removed exposed debug endpoints, enforced [Authorize], disabled Swagger in production
- Moved hardcoded secrets to GitHub Actions Secrets, out of source control
- Built CI/CD pipeline (GitHub Actions) with automated post-deploy security checks
- Main contributor to the admin dashboard (Next.js, React Query, shadcn/ui): clinic booking with a public booking page, subscribers, diet plans, users, meals and conversations

Autoyo Full-Stack Developer | May 2026 to Present

Full-stack developer for a bilingual smart home e-commerce platform, focused on serverless backend integrations, automated workflows, and secure API communications.

- Architected a Next.js/React storefront with interactive 3D/2D room environments using react-three-fiber
- Engineered a serverless backend via secure Google Apps Script webhooks and Google Sheets for real-time SKU syncing
- Hardened system architecture by resolving authentication redirect loops and enforcing shared-secret payload validation
- Built automated transactional workflows integrating Resend and WhatsApp APIs for seamless order processing
- Configured advanced Next.js middleware to handle complex multi-subdomain routing between storefront and admin dashboard

Vizzy Full-Stack Developer | Jan 2026 to Present

Sole developer of an AI-powered marketing platform serving businesses in the Egyptian market.

- Built full-stack application using Next.js, TypeScript, Django REST Framework, and PostgreSQL
- Integrated Paymob payment gateway with secure HMAC webhook verification
- Implemented real-time chat system with AI content generation using Supabase and n8n workflows
- Deployed on Azure App Service with CI/CD pipelines using GitHub Actions
- Implemented security improvements including httpOnly cookie authentication and CSRF protection

Self-Employed Software Developer | Nov 2025 to Dec 2025

Built a POS and inventory system that now runs in 5 mobile-accessories stores.

- Developed a 13-module POS: checkout, stock counts, purchases, returns, repairs, installments and e-wallets
- Implemented subscription and system usage control logic
- Built employee attendance and sales tracking features
- Designed relational database schemas and backend APIs using Node.js

Culture and Science City Full-Stack Developer | Mar 2026 to Present

Built the Exam & Learning Platform of the institute of computer science, used by 1,225 students in a single day across 7 labs (announced by the institute, March 2026).

- Laravel 12, Inertia and Vue 3 platform running on each lab's local server, with no internet required
- A different shuffled exam for every student from course question banks, with auto-save and instant grading
- Live proctoring with an anti-cheat event log, plus Word and Excel import for questions and students

Education

Culture and Science City Bachelor's Degree in Computer Science | Sep 2021 to Jun 2025

Skills

- **Frontend:** Next.js, TypeScript, React, JavaScript, HTML, CSS, Vue.js
- **Backend & DB:** Node.js, PostgreSQL, MySQL, SQL Server, Django REST, Laravel, ASP.NET Core (C#), Supabase, Firebase
- **Cloud & DevOps:** AWS (S3, EC2), Azure, GitHub Actions (CI/CD), Git
- **AI & Workflows:** AI-Assisted Development, Claude Code, Cursor, Prompt Engineering, Agentic Workflows, n8n

Certifications

- Html5 app development fundamentals **Microsoft** 08/2017
- Penetration testing and ethical hacking **Cybrary** 09/2017
- Python for security professionals **Cybrary** 09/2017
- Mobility and device fundamentals **Microsoft** 09/2017
- Database administration fundamentals **Microsoft** 10/2017
- It Essentials **Cisco** 03/2018
- Microsoft office specialist master **Microsoft** 09/2018
- Codelabs certificate of participation **Huawei** 11/2019
